

FARIS MAULANA SAPUTRA

Tanah Abang, Jakarta Pusat | 085693470653 | faris.m.saputra@email.com
LinkedIn: [linkedin.com/in/farisms](https://www.linkedin.com/in/farisms) | GitHub: <https://github.com/farismns>

Summary

Information Systems graduate with hands-on experience in Front-End Development, Back-End Development, Data Analysis, and Machine Learning through academic, personal, and team-based projects. Experienced in building responsive web applications, RESTful APIs, data processing workflows, and time-series forecasting applications. Familiar with React, JavaScript, Node.js, Express, Python, SQL, and Git. Analytical and adaptable, with a strong interest in developing data-driven and user-focused applications.

Skills

Programming: JavaScript, SQL, HTML, CSS, Python
Front-End Development: React, Vite, TailwindCSS
Back-End Development: Node.js, Express, RESTful API
Database & Tools: MySQL, Git, GitHub, VS Code

Education

Gunadarma University — Depok, Indonesia
Bachelor of Information Systems | 2022–2026
GPA: 3.84/4.00
Relevant Coursework: Web Development, Database Management, Data Analytics

Experience

Laboratory Assistant & Instructor — Gunadarma University
Depok, Indonesia 2024 - 2025

- Prepared practicum rooms and equipment to ensure the smooth conduct of teaching and learning activities.
- Facilitated laboratory sessions by explaining course materials and assisting students in resolving issues encountered during practical activities.
- Developed evaluation materials and conducted student assessments to measure learning outcomes.
- Systematically organized and maintained academic administrative data and practicum documentation.
- Collaborated with the laboratory management team to support effective learning activities and achieve optimal learning outcomes.

ASAH led by Dicoding in association with Accenture

Participant — Front End Developer | 2025 - 2026

- Participated in a structured technology development program focused on strengthening technical and professional skills
- Contributed as a Front-End Developer to LearnCheck!, a capstone project developed with a team.
- Developed responsive user interfaces using React, Vite, and TailwindCSS.
- Integrated the frontend with an AI-powered backend through the application interface.

Projects

LearnCheck!

Capstone Project | Front-End Developer | 2025

- Developed the front-end interface for LearnCheck, an automated formative assessment feature integrated into the Dicoding LMS via iFrame.
- Built responsive and reusable UI components using React and TailwindCSS to deliver a seamless learning experience across devices.
- Integrated the frontend with an AI-powered backend that generates assessment questions based on sub-module learning materials.
- Implemented LocalStorage to persist students' assessment progress locally in the browser without requiring repeated authentication.
- Optimized the application for embedability and responsiveness, enabling easy integration into the existing LMS ecosystem.

Outpatient Visit Forecasting System

Undergraduate Thesis Project | 2026

- Developed a time-series forecasting application using Python, Prophet, and Streamlit to forecast daily outpatient visits at Rumah Sakit Umum Aulia across multiple polyclinics.
- Processed and transformed approximately 97,000 outpatient visit records into structured daily time-series data.
- Implemented time-based train, validation, and test splits and Grid Search for Prophet hyperparameter tuning.
- Compared Prophet with multiple baseline models and evaluated forecasting performance using MAE, RMSE, WAPE, sMAPE, and Bias.
- Built a modular Streamlit dashboard with separate forecasting, historical data, and evaluation pages, supported by stored model artifacts and automated tests.

OpenMusic API

Back-End Development Project | 2025

- Developed a RESTful API using Node.js and Express for an OpenMusic application.
- Implemented server-side routing and API request handling for application resources.
- Applied RESTful API architecture to support communication between clients and the application.

Laptop Price Prediction

Research Project | 2025

- Developed a machine learning application in Python to predict laptop prices based on product specifications.
- Prepared laptop specification data and implemented a predictive model for estimating laptop prices.
- Integrated the trained model into an application using a serialized model artifact and supporting dataset.

Certifications

Badan Nasional Sertifikasi Profesi (BNSP)

Junior Web Programming | 2026

ASAH led by Dicoding in association with Accenture

React & Back End with AI | 2026

ADDITIONAL INFORMATION

Languages: Indonesian (Native), English (Intermediate)
Interests: Front End Development, Back End Development, Data Analytics
